Upgrade Unifying Receiver from RQR12.01_B0019 to RQR12.10_B0032?
```

This release addresses an encrypted keystroke injection vulnerability sent by pointing devices. The vulnerability is complex to replicate and would require a hacker to be physically close to a target.

A few of Logitech's devices used to send select buttons in an unencrypted way, and in an effort to protect against this vulnerability, Logitech removed the feature. Affected hardware is:

- Wireless Mouse M335
- Zone Touch Mouse T400
- Wireless Mouse M545
- Wireless Mouse M560

- Touch Mouse M600
- Touch Mouse T620
- Wireless Rechargeable Touchpad T650

Although Logitech does not recommend it, these features may be re-activated by keeping/downgrading the receiver to an older firmware.

Unifying Receiver and all connected devices may not be usable while updating.

Perform operation? [Y|n]:
