

pgAdmin4

STORAGE_DIR

Annoyingly, defaults to '/var/lib/pgadmin4/storage' which, in Dockerised environments, ends up buried where sudoers fear to tread. Moving it:

```
nano pgadmin4/config_local.py
```

Add:

```
STORAGE_DIR = '/storage'
```

Then, perhaps, in docker-compose.yml:

```
volumes:  
  - /home/seanys/Workspace/PostgreSQL/storage:/storage  
environment:  
  - STORAGE_DIR:/storage
```
