QNAP drive

Mounting a wonky (RAID) drive from a QNAP NAS on another machine.

Brief list:

1. apt-get install mdadm
2. Reboot, with drive plugged in
3. Check lvdisplay that drive is present
4. mount -o ro /dev/vg289/lv2 /mnt/roms
5. cd /mnt/roms/ROMs/
6. rsync -avze ssh . admin@kargath:/share/CACHEDEV1_DATA/ROMs/

Other stuff:

- Check /etc/mdadm/mdadm.conf on original and target machines for the same drive ID
- Or, if mdadm.conf doesn't exist: mdadm –examine –scan > /tmp/mdadm.conf
